DATA COLLECTION DESCRIPTION

KNOWLEDGE, ATTITUDES, AND PRACTICE OF CONTRACEPTION IN TAIWAN:
SIXTH PROVINCE-WIDE FERTILITY SURVEY (KAP VI), 1986 (ICPSR 6867)

SUMMARY: The last of six province-wide surveys of married women in Taiwan was conducted in 1986 to add to the information previously gathered in 1965 (KAP I, ICPSR 6862), 1967 (KAP II, ICPSR 6863), 1970 (KAP III, ICPSR 6864), 1973 (KAP IV, ICPSR 6865), and 1979 (KAP V, ICPSR 6866) regarding women's knowledge of, attitudes toward, and practice of contraception. In addition to continuing questions about family relations, fertility and family planning, and family demographics, this survey gathered additional information on current and past residential arrangements and whether the parents lived with any of the husband's married siblings. Also examined were employment and nonfamily residence prior to marriage, along with an in-depth look at the courtship process itself, including how the couple met, dating, and engagement. Demographic items such as age, education, employment, and family history are included for both husband and wife.

UNIVERSE: Married women aged 20-49 years in nonaboriginal townships in Taiwan.

SAMPLING: Stratified multistage probability sample.

NOTE: The codebook and data collection instrument are provided as a Portable Document Format (PDF) file and the frequencies are provided as two PDF files. The PDF file format was developed by Adobe Systems Incorporated and can be accessed using PDF reader software, such as the Adobe Acrobat Reader. Information on how to obtain a copy of the Acrobat Reader is provided through the ICPSR Website on the Internet.
